강의 개요

This subject introduces students to ideas about the form of cities and how they are designed and developed. The subject is organized into two parts:

Part 1 explores the forces which act to shape and to change cities. Starting with Seoul and the Korean city as a reference, we will examine key forces affecting contemporary urban development, including the market, social forces, public development, regulation of private development, and incentives to encourage good design. Finally we will consider how cities define a vision for their future and how these are articulated in plans and proposals. Lectures will be supplemented by guest presentations, case studies and field trips.

강의 목표

To learn the basic theories and practice of contemporary Urban Design
