<b>강의목표</b>	<p>This course introduces spatial analysis and Geographic Information Systems (GIS). The lecture components of the course address why an understanding of spatial disparity matters in real estate studies and help students explore metropolitan area issues particularly regarding spatial inequality. The laboratory components of the course offer students opportunities to develop technical skills for mapping and conducting spatial analysis. In addition to attending lectures and completing lab exercises, students are required to undertake an individual project that conducts spatial analysis to the real estate applications. Through the project, students are expected to synthesize what they have learned and replicate the types of practices commonly encountered by professionals in real estate practice.</p>
